The PD104-AN10 Analog 0-10V controller enable the Dialog system to control a single FORWARD PHASE dimming load. The device receives a 0-10V signal from the Dialog system (WDB-3314 or WRC-#). This signal is then translated to an analog dimming to control forward phase dimming loads. *Not compatible with reverse phase dimming loads*

**Enclosure Installation**
Surface mount the dimmer pack in a well ventilated area where the ambient temperature does not exceed 104° F for full load operation.

*not included*
PD104-AN10 General Wiring Instructions:

Wiring Notes:
- DO NOT EXCEED 1000 W (4 Amps.) per each dimmer @ 277VAC.
- All wiring from control to dimmers is low voltage (NEMA Class 2)
- PD104-AN10 dimmer packs may be fed by one 20 A (maximum) branch circuit and may have up to Four separately dimmed loads.
- CAUTION: DO NOT attempt to parallel outputs to increase capacity.
- Installations must conform to local and/or NEC code

PD104-AN10 Typical Control Wiring:

Analog 0-10V Control Inputs

**Control Input requirements:**
10 VDC max sinking 1 mA

**Optional:** Could be also controlled with 100 KOHM potentiometers

Figure 5 - PD104-AN10-277 Typical 277 VAC Wiring.

**CAUTION:**
- Fuse 5 Amps/250V, quick blow
- Turn OFF breaker before replacing

Mount on a grounded 2 gang metal box.
