Features

- Factory set to Vacancy (Manual ON)
- 180° coverage
- DualTech sensors utilize ADI-Voice technology, which has advanced digital signal processing for accurate detection of human speech
- Self-adapting mode can be set to use both Passive Infrared (PIR) & ADI-Voice technologies to automatically track occupancy tendencies for maximum energy savings
- Smart Sensing allows for an immediate return to occupied mode in the event of a false off being triggered
- Can be programmed by on-board switches and dials or a handheld Infrared Setting Unit (WIR-3110) for added convenience during commissioning.

Operation

Line voltage sensors draw control power directly from the lighting circuit they are intended to control. When in operation the sensor will detect initial motion using PIR; once motion is detected, the internal contact will close. ADI-Voice is then activated to work alongside PIR to maintain the occupied condition as long as people are within the sensing range.

DIMENSIONS & MOUNTING

- Mount in a 347Vac gang box.
**Wiring Instructions**
The WOS Series Line Voltage sensors are equipped with #14AWG leads. Use appropriate sized wire-nuts to connect the wires to the incoming load terminations.

**Electrical Connections**

![Electrical Connections Diagram]

**Sensor Settings**

**Programming - IR / Manual Setting**
Programming can be done either with the DIP switches and dials on-board the device or with the WIR-3110 setting unit. For more details and additional options, please see the “WIR-3110 Manual”.

**Detection (Dual or PIR Only)**
When in operation, the sensor will detect initial motion using Passive Infrared; once motion is detected the ADI-Voice is then is activated to work alongside the PIR to maintain occupancy. The ADI-Voice can be disabled on any dual tech sensors.

**Automatic Timeout**
By setting the timeout dial to maximum, the sensor will be put into automatic mode which will adjust the time out automatically to maximize energy savings and occupant comfort.

**Smart Sensing**
When vacancy occurs, sensitivity of the ADI-Voice technology transitions from maximum to zero over an adaptively determined time period, based on occupancy tendencies. During this period, ADI-Voice can turn the lights back on immediately, even with no line-of-sight to the sensor, assuring the best combination of user convenience and energy savings.

Energy consumption due to false triggers is minimized by the automatic walk-through mode. This feature turns the lights off after 3 minutes if no occupancy detection occurs after the first 30 seconds after initial turn on.

**Photo Sensing (-P)**
When enabled, occupancy alone will not trigger the output state to on. If occupancy is detected AND there is a deficiency of natural light, the output is triggered on.

**Multi-Level Photo Sensing (2-Pole w/ Photo Option)**
Photo sensing on a 2-pole sensor can be configured to either restrict both poles or the secondary pole only; if set to “Secondary Pole Only”, the primary pole will trigger based on occupancy, regardless of the photo setting.
INSTALLATION

- Mount the WOS Series sensor on the wall about 4' above floor level near the midline of the room so its PIR detection zones cover the room area and any obstructions are within range of the ADI-Voice detector.
- There should be no obstructions between the sensor and the room entrance. This ensures that the sensor’s PIR lens will be activated when a person enters the room, which will subsequently trigger the ADI-Voice.

Installing in Offices
- Sensor effective in obstructed spaces.
- Voice sound re-activation prevents lights out condition.

Installing in Washrooms
- Sensor effective in partitioned spaces.
- Voice sound re-activation prevents lights out condition.

Standard Lens
- Optimal usage is to detect small motions such as hand movements.
- Designed for a mounting height of up to 4ft.
- ADI-Voice can detect around corners that PIR cannot to maintain occupancy.
Installation & Wiring Directions

Installation
Mounting of the device requires a 347Vac gang box. Install by recessing the device into the 347Vac gang box; lining up the mounting holes and securing it using the screws provided.

Wiring

**CAUTION**

TURN POWER OFF AT THE CIRCUIT BREAKER BEFORE WORKING WITH OR NEAR HIGH VOLTAGE

The WOS Series Line Voltage sensors are equipped with #14 AWG stranded leads. Use appropriate sized wire-nuts to connect the wires to the incoming load terminations; for installation with field-installed conductors of 60ºC minimum rating.

DIP Switches
A bank of eight DIP switches and two rotating controls can be used to manually setup and configure the sensor.
